

Standard construction curved Blokup glass block wall

#### PLANNING A RADIUS WALL

### Curved Wall System

The Blokup curved wall system makes a spectacular feature wall or entry. With Blokup's patented system, you can maintain the open feeling to your home and have your privacy too.

In the past, curved walls required professional installation, which was a costly exercise that placed glass block walls outside of the price range of many homeowners. With Blokup's easy to use system, you can now install a curved wall yourself to give your home or office the unique look that only glass blocks can offer.

This system is so exceptional and easy to use that even the most inexperienced handyperson can buy and assemble the most complex of curves with amazing results. You are not on your own though, one of our experienced staff can show you how easy it can be and offer answers to your questions.

### Opening Window

Now any bathroom or kitchen feature window can be opened providing greater ventilation, maintaining privacy and letting light into the far corners of your favorite room. The Blokup Opening Window system is thin, light, strong and simple to install.

The Blokup Opening Window removes the need for window coverings all together meaning that you can keep prying eyes out and still let nature light up your life during the day, giving your home a more open feel. The Opening Window also gives the added benefit of thermal protection, helping to keep the heat out and the warmth in, saving you money on electricity all year round.

It is very easy to combine your existing windows with ours as we work with all major window manufacturers and builders so that we can make the inclusion of a Blokup Opening Window an easy and enjoyable experience.

You won't find anything that comes close to the Blokup Opening Window.
